

# High Voltage Education and Courses

Due to the raising demands of energy supply and usage, we see an urgent global growing demand for educated and skilled technicians on the High Voltage area

In Denmark, Skive College is the only certified provider of education and courses on the High Voltage area. As Danish companies are among the best in the world to manufacture, install and service wind turbines around the globe, our courses are designed and developed in close cooperation with companies such as Siemens Gamesa, MHI Vestas as well various other suppliers within the world of wind and electricity.

At our purpose-designed facilities, which are fully equipped with a wide range of operational high/low voltage training equipment and control center, we train HV Technicians on both basic and specialist levels in the installation, maintenance and troubleshooting of high-voltage installations in wind turbines and power plants.

Our courses are designed to be delivered over a matter of days; we can as well provide custom made courses to our clients.
